AMBER SAHAY

Chennai, India | 9629733204 | ambersahay18@gmail.com | linkedin.com/in/amber-sahay-4371b526b | github.com/Am-create7754

PROFILE

Computer Science undergraduate (2027) with a strong foundation in data structures, algorithms and backend engineering. Experienced in designing, developing, testing and deploying software, from AI-backed applications and full-stack platforms to freelance client websites. Completed a global team-project internship (QWorld) and work well in collaborative teams. Seeking a Software Engineering internship and 2027 graduate roles.

EDUCATION

B.Tech, Computer Science — SRM Institute of Science and Technology | 2023 – 2027 | CGPA: 8.89

SKILLS

Languages & Core CS: C++, Python, JavaScript, SQL, HTML/CSS, Data Structures & Algorithms, Object-Oriented Programming, Computer Networks

Backend & Web: React, Node.js, Flask, RESTful API design, SQLAlchemy, PostgreSQL, MongoDB, DuckDB, Parquet, Pandas

Systems & Networking: TCP/IP, TLS/SSL, multi-threading, packet analysis, Wireshark

AI Engineering: LLMs, RAG, embeddings, vector databases, AI agents, tool calling, MCP, LLM evaluation, LoRA, prompt engineering

Testing, Tools & Platforms: Pytest (unit, integration, regression testing), Git, GitHub, AWS, Postman, Metasploit, Cursor, Claude Code, Agile methodology

EXPERIENCE

Freelance Web Designer & Developer | Freelance

- Designed and developed portfolio websites for 2 freelance clients, owning the work from requirements and visual design through to implementation.
- Delivered and deployed the first client's portfolio live at aryan-sahay.netlify.app; the second client's website is currently in progress.

Project Intern, QWorld | Aug 2025 – Sep 2025

- Selected for the QWorld global internship programme to build a Quantum Machine Learning based cybersecurity project, competing against 20 teams.
- Developed data pipelines and optimized technical workflows to improve the efficiency and accuracy of a ransomware threat detection system.
- Executed core technical tasks and model training; the team placed 3rd of 20 global teams within a two-month delivery window.

Team Leader, AIESEC in Chennai | Aug 2024 – Feb 2025

- Progressed from General Body Member to Team Leader in the Incoming Global Volunteer department after onboarding 3 key partners.
- Led project coordination and end-to-end task execution across a cross-functional team, mentoring members to improve workflow efficiency and internal communication.

PROJECTS

IPL Intelligence — AI Cricket Analytics & Investigation Agent | github.com/Am-create7754/Pitch-Prompt

Python, DuckDB, Parquet, Cricsheet, OpenAI API, Plotly, Pydantic, Pytest

- Built an AI analytics agent supporting natural-language investigation across 1,200+ IPL matches and 295K+ ball-by-ball deliveries at player, team, venue, matchup, phase and match level.
- Engineered a deterministic DuckDB + Parquet analytics pipeline supporting batting/bowling metrics, phase splits, player matchups, leaderboards and season/venue analysis.
- Developed a Match Intelligence Engine reconstructing delivery-level game states to detect partnerships, collapses, chase pressure and evidence-backed turning points, surfaced through interactive Plotly visualizations.
- Integrated OpenAI tool calling with deterministic-first routing, restricting the LLM to interpretation and orchestration while all statistics remain grounded in validated analytical tools, with a no-API deterministic fallback.
- Implemented unit, integration, golden-data and regression testing, validating all analytics against known IPL records.

MaDDoC — AI-Powered Healthcare Marketplace (in progress) | github.com/Am-create7754/MaDDoC

React, Node.js, PostgreSQL, Prisma, Razorpay, Daily, REST APIs, AI

- Built a multi-role healthcare marketplace connecting patients with verified doctors for discovery, appointment booking, payments, video consultations, and digital prescriptions.
- Implemented secure doctor onboarding, verification, availability management, role-based dashboards, chronic care tracking, medical records, and doctor–patient communication.
- Integrated Razorpay payments, Daily video consultations, notifications, secure document storage, and subscription/sponsored doctor marketplace features through modular backend services.
- Developed an AI Health Assistant with authorization-aware patient context for personalized health guidance, care-plan support, and progress insights while preserving doctor-controlled clinical decisions.

ACHIEVEMENTS & CERTIFICATIONS

- SAP Certified Backend Developer — ABAP Cloud (RESTful Application Programming Model).
- 3rd place among 20 global teams — Quantum Machine Learning cybersecurity project, QWorld Global Event.
